

## Project Summary

### What it does:

Creates events, tracks registrations, and shows dashboard metrics.

### Demo link:

Use the GitHub Pages URL after publishing the repository.

### Project URL:

Use the public GitHub repository link.

### System requirements:

Any modern browser. No server required for the demo.

## Key Features

- Fast event creation with required-field and capacity validation.
- Attendee registration with duplicate detection and automatic total updates.
- Live dashboard metrics for events, registrations, capacity, and fill rate.
- Search and filter tools that lower user effort.
- JSON export utility for collected data backup or migration.

### System Architecture

### Why this project matters

Campus events are often coordinated through disconnected tools like spreadsheets and email. This system reduces manual tracking, improves visibility, and creates a clean path toward a future database-backed deployment with stronger reporting, user roles, and centralized storage.
